CROFT (Early Type) A new strain of Croft Lilies introduced by Somerset to the trade during 1947. Comments have been very favorable as to their forcing qualities and bud count. Until more information is available we recommend that the same time for forcing be allowed as for regular Croft but they require less heat; are therefore ideally suited for the grower whose houses cannot carry normal Croft temperatures. We saw one lot brought along in the same house with Carnations and Snapdragons that made Easter 1948 easily.

Size and pack the same as Croft. Price will also be similar.
